

HOBART ADVANSYS™ CL_eR CONVEYOR-TYPE WAREWASHER

advansys™

The most energy- and water-efficient conveyor-type Hobart warewasher ever. The Advansys™ CL_eR.

The Advansys CL_eR brings Hobart's Energy Recovery technology to the industry-leading water and energy savings of Opti-Rinse™. The result? A conveyor-type warewasher with Hobart's legendary longevity built-in that saves you so much in both energy and water, it could literally pay for itself within a few years, depending upon your warewashing volume.

Turning vapor into savings.

The Advansys CL_eR adapts Hobart's unique Energy Recovery technology—introduced so successfully in the Advansys Ventless door-type warewasher—to the rigorous productivity demands of the high-volume CL_e conveyor-type warewasher.

The Energy Recovery technology works just the same in both warewashers. Only with the higher volume CL_e, there is more to work with—and thus more energy savings. The Energy Recovery unit captures the heat and uses it to preheat the incoming water supply to the booster heater. With Hobart's Energy Recovery, a cold water supply—even with temperatures as low as 55°F—is all that is needed for the final rinse.

Combined energy and water savings for an annual ROI in the five figures.

With a combined savings of up to \$11,000—\$2,047 from Energy Recovery and \$9,192 due to Opti-Rinse—the Advansys CL_eR sets a new standard in the low-cost operation of a conveyor-type warewasher capable of cleaning and sanitizing up to 8,550 dishes an hour.¹

The most sustainable conveyor-type warewasher ever to carry the Hobart name.

While naturally recognizing the savings in dollars that the CL_eR delivers, it is perhaps equally important to remember the impact your energy and water savings could have on the environment. The issue of sustainability grows more important with every passing day. With the Advansys CL_eR, you can do the right thing and the smart thing at the same time.

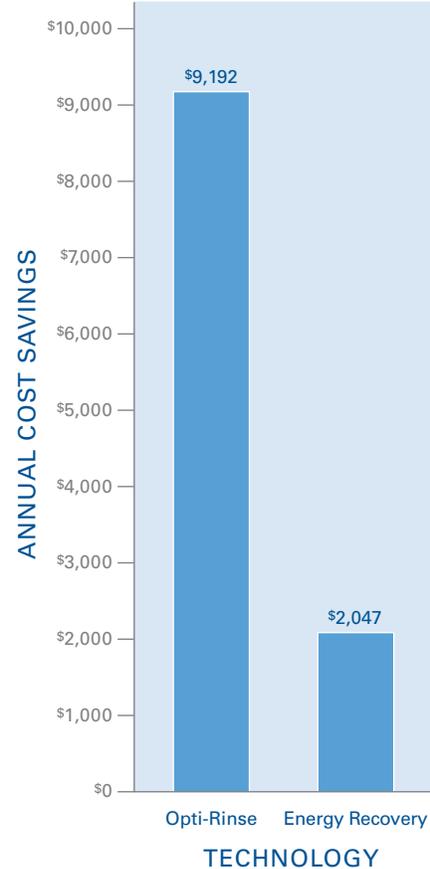

The CL_eR is all CL_e.

The Advansys CL_eR delivers the same great performance all CL_e warewashers offer:

- Rinse water, energy and sewage savings of up to \$9,192 a year
- ENERGY STAR® rating, an ideal candidate for a sustainable operation
- Exclusive Opti-Rinse technology for 50% less energy and water usage
- Large, hinged doors for easier interior cleaning
- Simple controls for quick verification of machine status and water temperatures

¹ Compared to Hobart conveyor-type warewashers without Opti-Rinse.

CL_eR Cost Savings

> Hobart's exclusive Opti-Rinse and Advansys technologies combine to deliver industry-leading cost savings. The Opti-Rinse water and energy savings of \$9,192 is based on a comparison to Hobart's previous conveyor-type warewasher without Opti-Rinse. The Advansys energy savings of \$2,047 is based on the CL_e conveyor-type without Energy Recovery technology.
