Item # _____

AEROWERKS TITE-TURN UNLOADER

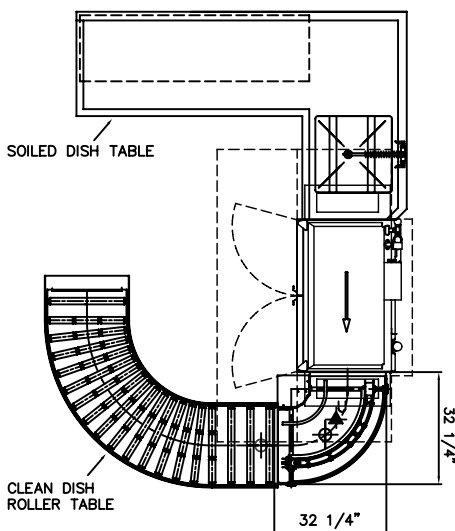

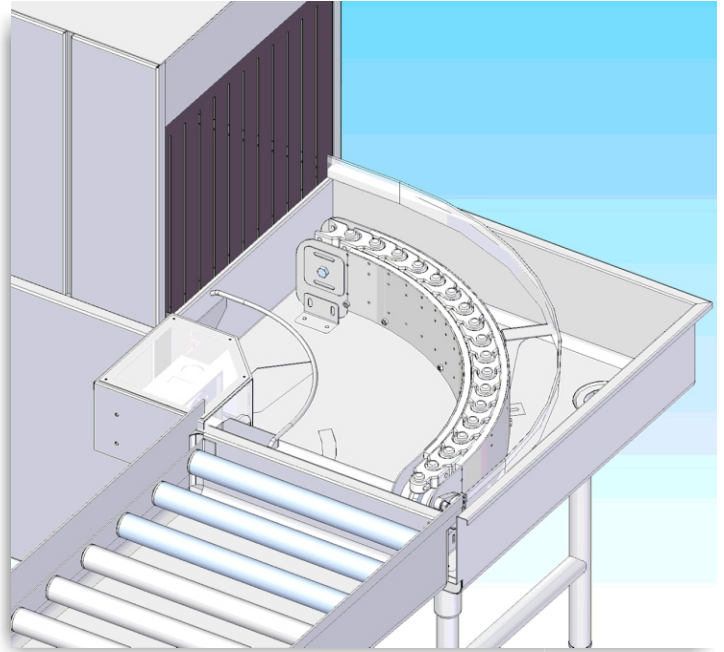

Description

The Tite-Turn Unloader allows for a dish rack to make the tightest 90° or 180° turn possible. It allows flexibility in dishroom designs to conserve or free up valuable floor space. The Tite-Turn Unloader is available in clockwise, counter clockwise, 90° & 180° models. The unit connects directly to any conveyor type dishmachine.

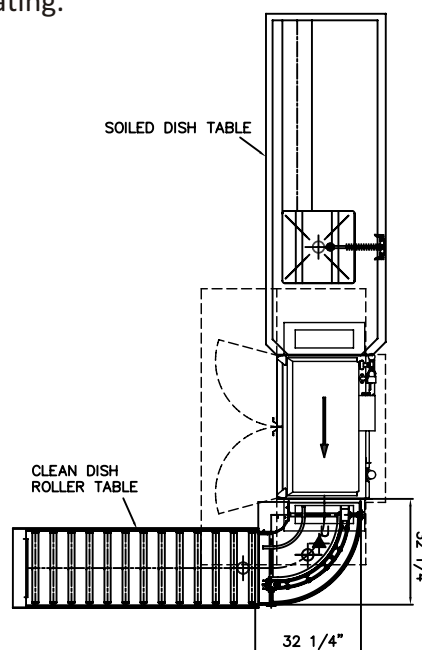

Further enhance your Clean Table area with a Gravity Roller Clean Dish Table. Roller sections accumulate the loaded dish racks with ease. Rollers are elevated to allow for a quicker drying time of the dishes.

Unloader Features :

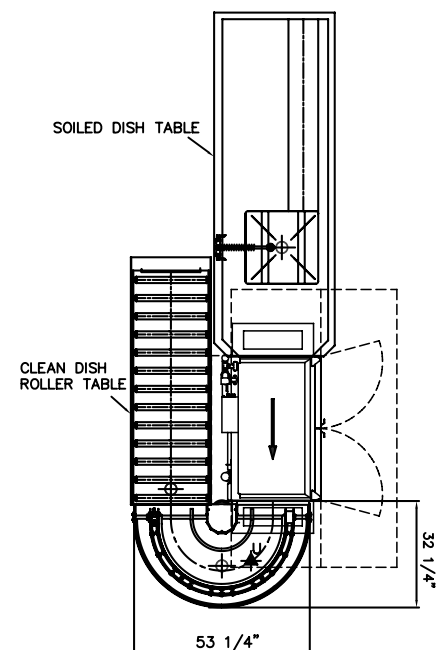

- Motor-powered turn track made from stainless steel (s/s).
 - Support structure made from 1 5/8" Ø s/s tubing with adjustable feet.
 - Plastic pivot-radius drive chain provides motive power to pull 20" x 20" dish racks around a tight radius so that overall powered curve dimension from end of dish machine to far side of table is approx. 32 inches.
 - Inside radius of unloader is equipped with E-Z Glide Rack Slide to support racks on inboard side.
 - The turn track is connected to the machine's discharge side and the roller table on the other end.
- The 90° turn makes a smooth transition to the roller table
- Electrical connection: ¼ HP motor 208V 3Ø 15-amp. Powered unloader is interwired to dish machine such that it is running when dish machine is operating.
